About the workshop

The Department of Metallurgical and Materials Engineering (DMME), National Institute of Technology (NIT) Jamshedpur, India, will host a five-day workshop on Structural Integrity Management and Protocols for Life Extension (SIMPLE) to deliver industry-based problem sessions, discussions, and lectures, etc., to enhance the Industry-Academic relationship on **30th October to 3rd November 2026**. Our target audience is expected to include engineers from the petrochemical, power, iron and steel, metallurgical, and heavy engineering industries, as well as students and researchers from academic institutions and research organizations. The workshop will bring together faculty, researchers, and industry experts in a well-connected zone.

The broad areas of this workshop will be:

1. Case study of industrial failures, 2. Mechanisms of material damage and quantification of material resistance, 3. Surface degradation and its prevention, 4. Characterization of damaged materials, 5. Quantification of damage and defects through NDT&E, 6. Simulation and modelling for structural integrity assessment, 7. Application of Automation, IoT, Digital twins, Big data, and Machine learning for structural integrity assessment, and 8. Codes, software, and professional norms for structural integrity assessment: ASME code, BIS standards, API guidelines.

Who Should Attend?

- Industry professionals
- Academicians and researchers
- Students

Why Attend?

- Learn from industry experts and lecturers
- Gain knowledge with real-world applications
- Networking with professionals in the field
